

## D. A. V. International School, Ahmedabad.

Dear Parents,

Many water borne diseases like malaria & dengue are wide spread these days. We at D.A.V are working our best to ensure there is no water logging & making efforts to keep the school clean.

For this purpose a committee has been formed comprising of 40 teachers. Each day 40 teachers along with one section of Grade 7 visits each & every corner of school and checks for water stagnation & breeding of mosquitoes. We even conduct fogging regularly in school, and mosquito repellants are placed in each class.

A team of AMC headed by Dr. Parth Panchal, AMC, Entomologist visited our school on 11<sup>th</sup> September, 2018. They conducted a workshop for Grade 7 & 9 students. They explained the importance of cleanliness and how to check breeding through a beautiful 'Nukkad Natak' and a movie clipping. They inspected our school, but could not find any breeding and have given a clean chit to our school.

Cleanliness is a habit that promotes a healthy life. It is the responsibility of each & every person. Any parent who wish to volunteer in helping and monitoring the cleanliness with the team of our teachers and students are welcome any day, any time.

Team DAV
